

Inventory Transfer

Enterprise Smartphone/Tablet App

PRODUCT DATASHEET

FEATURES/BENEFITS:

- Inventory easily located by part, lot or location
- Intuitive functionality reduces training time
- Connects with virtually all ERP systems - no duplicate databases
- Display pictures, drawings or videos
- User directed transactions
- Easy to read screen

Inventory Transfer is an enterprise app that offers workers a way to easily move and track inventory from one bin location to another or from one warehouse to another. The app can be used to put away materials that have either been received or have gone through inspection. Using the easy-to-read screen, the material handler can view what needs to be put away and identify an item's home bin location, as well as other sites if needed to consolidate inventory for more efficient storage. The inventory transfer record has the option of being sent to the back-end system.

INVENTORY TRANSFER MIDDLEWARE

- The middleware server is a both a web server and an application server combined.
- The middleware is a virtual server and can run on virtually any operating system and without expensive 3rd party licensing.
- The Mobilize-IT import/export tool allows the mapping of text files (.CSV or .XML) to and from the Inventory Transfer database table and back office system.
- Mapping tables arrange import and export fields to match up with the Mobilize-IT Inventory Transfer fields.
- The Mobilize-IT middleware controls how often the inventory data needs to be refreshed and up dated to the users and the back end systems.
- Mobilize-IT application data is encrypted and secure.

Guardian Mobilize-IT Middleware Server
