

Enterprise Smartphone/Tablet Apps for Manufacturing, Distribution and Field Service

PRODUCT DATASHEET

FEATURES:

- Takes advantage of Native device features
- Web based Control Center for user, device and data management
- Multi-tiered Security
- Integration with a variety of back-end data sources
- Customized User Interface

MOBILIZE-IT is a collection of Enterprise Applications that enable manufacturing, distribution and field service companies to quickly deploy applications to mobile workers on smart phones/tablets that are securely connected to their business data. Utilizing industry proven middleware technology, the server platform manages multiple mobile, native and web applications that securely connect with a variety of back-end data sources to smart phone/tablet devices. Through the use of the Mobilize-IT Control Center, the enterprise can easily manage and deploy secure mobile applications across their organizations at a lower cost than older technologies.

BENEFITS:

Native Applications - Mobilize-IT apps are designed to leverage the native features of the devices for the particular application such as bar code scanning, voice recognition, GPS and camera options.

Application library - Pre-configured apps include: Quality Inspection Capture, Inventory Count, Inventory Movement, Purchase Order Receiving, Put Away, Order Picking, Restocking, Order Entry/Status, Labor Reporting, Route Delivery, and Custom Apps.

Enterprise back-end integration - Our Mobilize-IT middleware tools and methods allow integration with virtually any back-end systems. Our GUI Import/Export utility allow customers the option to easily map their data into the relational database and to export transactions back to their systems in various text file formats.

Multi-tiered security - Various levels of security can be implemented for both the client and the middleware which include access control, encrypting data and remote wipe capabilities.
